Highlights

Integrated RFID reader (PD415)

The optional Hytera RFID tags and checkpoints, transmitting this information back to the Hytera Patrol software by radio signal. The ideal solution for security and patrol requirements.

Patrol System with the PD415

The Hytera Patrol system is an application that uses the data captured via RFID (PD415 only). Upload your site map and plot your checkpoints, then once your staff have been assigned a radio tag, the patrol system will monitor and log their journey in real-time when they tag any asset checkpoint.

Impressive voice quality

With embedded digital technology, the PD4 series produces outstanding voice quality, even in noisy environments, and at the outer perimeters of radio coverage.

Mixed analogue and digital channel

This function ensures that the PD4 radios can detect both analogue and digital signals and change automatically to the relevant operating mode.

Robust

Both radios are dust and water-resistant according to IP55 (PD405) or IP54 (PD415) and meet the US military standard MIL-STD-810 C/D/E/F/G.
